

Fenimore Landfill Update

Wednesday, February 5 - Thursday, February 6, 2014

Landfill Site Work

The custom treatment system continues to operate 24 hours a day. All gas collected from the landfill is being directed to the custom system. DEP continues to monitor the emissions from the system to ensure it is operating safely.

Moving and reconnecting the second oxidizer to the custom treatment system was completed. Testing of the second system will take place this month.

Air Monitoring

The nine H₂S and three SO₂ air monitoring stations continue to operate 24/7. To date, all SO₂ levels have been well within air quality standards. Live data for both the H₂S and the SO₂ monitors is available at <http://54.235.249.118/guests/greenlight.get.live.data.2a.php>.

On Wednesday, February 5, ROX 8 recorded an extraordinarily high reading. DEP investigated and determined the spike was not related to the landfill. DEP is working with Emilicott to determine the cause of the spikes.

A Look Ahead

Limited truck traffic is needed to supply materials to the site. In addition, wastewater from the scrubbers will be trucked off the site periodically. For all necessary truck traffic, DEP will continue to work with local officials to ensure that safe traffic controls are in place utilizing the truck route.

The pressure testing of the water line replacing the temporary water supply is expected to take place when the weather improves.

Fenimore Call Center

DEP has established a call center to assist with resident questions. If you wish to file an odor complaint, call 1-877-WARN-DEP, 24/7. If you wish to ask questions without filing an odor complaint, call DEP at (609) 341-2875 during regular business hours (9:00 a.m. – 5:00 p.m., Monday through Friday). On weekends and evenings and holidays, callers can leave a message and their calls will be returned. Questions may also be emailed to RoxburyTwpFenimoreQuestions@dep.state.nj.us.
